This course focuses on SDG Indicator 2.1.1, which is one of two indicators that focus on food insecurity. The PoU is an estimate of the proportion of the population facing serious food deprivation, and is derived from official national level information on food supply and consumption, and energy needs. This course has been developed to support countries in analysis and reporting for Indicator 2.1.1.

- Relevant concepts, including hypothetical average individuals, dietary energy requirements and habitual dietary energy consumption (DEC)
- Potential data sources for the indicator: dietary intake surveys, household consumption and expenditure surveys (HCES) and food balance sheets (FBS)
- How the probability based approach uses an aggregated framework to define the parameters of a distribution, and sets a threshold for undernourishment
- Manipulation of data to obtain the distribution of dietary energy consumption
Who is the course for?

The target audience of this course includes:
- Policy makers or advisors
- Directors and senior staff of national statistical offices
- Statisticians of national statistical offices
- FAO regional statisticians

Key partners

This course is part of a series on Sustainable Development Goal indicators, developed by the Food and Agriculture Organization of the United Nations (FAO) to support countries in the collection and analysis of statistical information for those SDG indicators for which FAO is custodian UN agency.

FAO e-learning Center

This course is available through the FAO e-learning Center. Please visit the Center and browse our extensive catalogue in multiple languages. Register once to access over 100 titles. All courses are available as a global public good for free.

How to access the course

1. Go to the e-learning center: www.fao.org/elearning, and select the category “Sustainable Development Goal indicators”
2. Register and log-in with your user name and password.

Registration is fast and easy.
