

## Agricultural risk management and resilience

### Course: Assessing risk in agriculture

©PARM/Carlos Tomas Lora Acosta

Risk assessments are prepared to develop a holistic risk management strategy. Assessing risks involves knowing how likely it is that each possible risk would occur, and what is their expected impact in terms of farm production or income losses. This course will look at what is needed to assess and prioritize risks including assessment methods - qualitative and quantitative - used at micro, meso and macro levels.

1 hour of learning, depending on learning needs

Available in English

### You will learn about

- Qualitative and quantitative methods commonly used to assess and prioritize risks
- The process and outcome of a risk assessment at local area and national levels
- Risk assessment and management capacity profiles in the country
- Key information required for carrying out a risk assessment

## Who is the course for?

The target audience for this course includes:

- Farmers, farm management advisors, farmer organizations and communities;
- Policymakers and planners, and other government officials; and
- Service and input providers and other intermediaries dealing with agricultural risk management services.

## Key partners

The course was developed by the Food and Agriculture Organization of the United Nations (FAO) and the Platform for Agricultural Risk Management (PARM) which is hosted by the International Fund for Agriculture Development (IFAD). The course is the result of the close collaboration with the European Commission (EC), Agence Française de Développement (AFD), Italian Directorate-General for Development Cooperation, KfW Development Bank, BMZ, and the New Partnership for Africa's Development (NEPAD).
